

ShowerWarm™ Shower Floor Heater Now Available by Speedheat®

Atlanta, Georgia— Speedheat US of Woodstock, Georgia, announced, today, the launch of their new product, ShowerWarm™ for heating shower floors and shower seats.

In addition to their energy efficient electric radiant floor heating products available for under all floorcoverings, Speedheat has extended their [Generation4™](#) product line to include the new [ShowerWarm](#) product for heating in showers. As with all Speedheat products, [ShowerWarm](#) is waterproof and [GFCI-protected](#) with a shielded, helically wound element with full ground surround, so there is no risk of electric shock. The micro-thin element is less than 1/16 inch causes no floor buildup, saving on installation costs, preparation, and installation time.

The installation is as simple as the [TileWarm™](#) products and can even be used as a continuation of a floor heating system in the bathroom. Products are available in 120V or 240V, depending on size and preference of the total heating system.

“Customers are ecstatic when they find out that their warm floors can continue when they walk into their shower or even when they use their shower seat,” says Peter Newman, President of Speedheat US. *“It just seemed like a logical addition to our already extensive and flexible product line.”*

In order to obtain a free, customized quotation for all Speedheat products, including ShowerWarm, customers, builders, or contractors can fax or email a drawing of their [floorplan](#) directly to the Speedheat Corporate Office in Atlanta, Georgia. The drawing is essential for pricing and system accuracy, and there is no obligation to make a purchase. The drawing can be simply a rough sketch with exact dimensions of all areas and thermostat placement preference.

Speedheat requests the following information for the most accurate quotation and a correctly customized system.

1. Drawing with measurements (exact dimensions) and placement of any large furniture, cabinets, doorways, drainage openings, etc.
2. [SmartStat™](#) thermostat location preference.
3. Floorcovering
4. Subfloor
5. Floorcovering installation method (i.e. glued, floating, nailed, and anything out of the ordinary for tile, carpet, etc.)
6. 120V or 240V system preference if applicable.
7. Whether system will be used for floor warming, supplementary heating, or primary heating.
8. Time frame for the job.
9. Contact information, such as name, company, address, email, phone, fax, etc. The location is important because the systems are customized according to heating needs by climates.

About Speedheat:

As the inventors of Generation4™ electric radiant floor heating, Speedheat has produced quality, energy-efficient heating solutions for over 20 years. With offices in more than ten countries, Speedheat is currently providing over 30,000,000 square feet of comfortable, safe, and energy efficient electric radiant floor heating under carpeting, area rugs, laminate, hardwood, tile, vinyl, showers, and more worldwide. Speedheat systems can be used as primary heating, supplementary heating, or floor warming.
