

IMPORTANT!

Connect One Monitor per Heater.

Each monitor can only be used once. Once connected to a heater, the monitor cannot be used on another heater.

Monitor arrives in sleep mode.

The 2 black leads are connected to keep the alarm silent.

1. To Wake from Sleep Mode

1. Unclip alligator clips and place monitor on a flat surface. *Do not hold black leads.*
2. You should hear a chirping tone within 60 seconds.

2. 120 Volt Connection

1. Connect 1st black lead to yellow lead from heater.
2. Connect green and yellow lead to green leads from heater.
3. Connect 2nd black lead to white lead from heater.
4. Chirping will stop and **green LED will flash continuously.**
5. If heater is damaged, the **LED will flash red** and alarm will sound.

240 Volt Connection

- Connect 1st black lead to red lead from heater.
- Connect green and yellow lead to the two green leads from heater.
- Connect 2nd black lead to black lead from heater.
- Chirping will stop and **green LED will flash continuously.**
- If heater is damaged, the **LED will flash red** and alarm will sound.
